

Tweak Catalog: App Packages, Scheduled Tasks, and Registry Tweaks

Full four-way inventory (this repo vs. `ntdevlabs` vs. `tiny11-automated` vs. `winutil`) backing `docs/script-comparison.md` §4 items 5–7. Where `docs/script-comparison.md` compares the *tools*, this document catalogs the *individual tweaks* so every line in `asl-win11maker.ps1` and `asl-win11.functions.ps1` traces back to a documented source.

Two other reference submodules (`UnattendedWinstall`, `unattend-generator`) are answer-file *generator* tools rather than WIM-servicing pipelines — they don't add new appx/task/registry tweaks beyond what's already catalogued here (their package-removal and telemetry tweaks are the same well-known set, just applied at a different *time*, during Setup's specialize pass instead of offline against the mounted WIM). See `docs/answer-file-generators-options.md` for what they do and why that timing difference matters, and `docs/build-options-reference.md` for the option-first, phase/category view this catalog feeds into.

*Re-verified against the reference submodules at their 2026-10-05 refresh (`tiny11-automated` `8bde4bd`, `winutil` `9c87c02`, `ntdevlabs` `00e7d8a`) — no new appx/scheduled-task/registry tweaks landed upstream since this catalog was last written; the only relevant upstream change in this window was `winutil`'s storage driver-injection fix, which is a *drivers-pipeline* concern, not a catalog entry — see `docs/build-options-reference.md`'s *Drivers* section.*

Default column key:

- **Active** — applied unconditionally by the serviceable build
 - **Commented** — present in the customization array/pipeline but commented out; opt in by uncommenting
 - **Core only** — applied only when `-Core` is passed
 - `-BypassMode` — applied only for the selected hardware-bypass strategy
-

1. App package prefixes (\$appPackagePrefixes)

Prefix	What it is	ntdevlabs	tiny11-automated	winutil	Default in this repo
AppUp.IntelManagementandSecurityStatus	Intel Management & Security Status OEM bloatware	✓	✓	✗	Active
Clipchamp.Clipchamp	Clipchamp video editor	✓	✓	✓	Active
DolbyLaboratories.DolbyAccess	Dolby Access audio OEM app	✓	✓	✗	Active
DolbyLaboratories.DolbyDigitalPlusDecoderOEM	Dolby Digital Plus decoder OEM app	✓	✓	✗	Active
Microsoft.BingNews	Microsoft News (Bing News)	✓	✓	✓	Active
Microsoft.BingSearch	Bing Search integration app	✓	✓	✓	Active
Microsoft.BingWeather	Microsoft Weather (Bing Weather)	✓	✓	✓	Active
Microsoft.Copilot	Microsoft Copilot AI assistant app	✓	✓	✗	Active
Microsoft.Windows.CrossDevice	Cross-device experience (Phone Link companion)	✓	✓	✗	Active
Microsoft.GamingApp	Xbox Gaming App (Game Pass hub)	✓	✓	✗	Active
Microsoft.GetHelp	Get Help support app	✓	✓	✓	Active
Microsoft.Getstarted	Tips / Get Started app	✓	✓	✗	Active
Microsoft.Microsoft3DViewer	3D Viewer app	✓	✓	✗	Active
Microsoft.MicrosoftOfficeHub	Office Hub ("Get Office" / Microsoft 365 app)	✓	✓	✓	Active
Microsoft.MicrosoftSolitaireCollection	Microsoft Solitaire Collection game	✓	✓	✓	Active
Microsoft.MicrosoftStickyNotes	Sticky Notes app	✓	✓	✓	Active
Microsoft.MixedReality.Portal	Mixed Reality Portal (VR/AR)	✓	✓	✗	Active
Microsoft.MPEG2VideoExtension	MPEG-2 video playback extension	✗	✓	✗	Commented
Microsoft.MSPaint	Paint 3D (legacy MSPaint UWP)	✓	✗	✗	Commented (already was)
Microsoft.Office.OneNote	OneNote UWP app	✓	✓	✗	Active
Microsoft.OfficePushNotificationUtility	Office push notification background service	✓	✓	✗	Active

Prefix	What it is	ntdevlabs	tiny11-automated	winutil	Default in this repo
Microsoft.OutlookForWindows	New Outlook for Windows app	✓	✓	✓	Active
Microsoft.Paint	Paint app (modern)	✓	✓	✓	Commented (already was)
Microsoft.People	People contacts app	✓	✓	✗	Active
Microsoft.PowerAutomateDesktop	Power Automate Desktop (RPA tool)	✓	✓	✓	Active
Microsoft.Recall	Windows Recall (older package name)	✗	✓	✗	Commented
Microsoft.ScreenSketch	Snip & Sketch screenshot tool	✗	✓	✗	Commented
Microsoft.SkypeApp	Skype UWP app	✓	✓	✗	Active
Microsoft.StartExperiencesApp	Start menu experiences / recommendations app	✓	✓	✓	Active
Microsoft.StorePurchaseApp	Microsoft Store purchase/checkout helper	✗	✓	✗	Commented
Microsoft.Todos	Microsoft To Do task manager	✓	✓	✓	Active
Microsoft.Wallet	Microsoft Wallet (NFC payments)	✓	✓	✗	Active
Microsoft.WebMediaExtensions	Web media codec extensions	✗	✓	✗	Commented
Microsoft.Windows.AI	Windows AI platform component	✗	✓	✗	Commented
Microsoft.Windows.AIFabric	Windows AI Fabric runtime	✗	✓	✗	Commented
Microsoft.Windows.Copilot	Windows Copilot integration	✓	✓	✗	Active
Microsoft.Windows.CoreAI	Windows Core AI component	✗	✓	✗	Commented
Microsoft.Windows.DevHome	Dev Home developer dashboard app	✓	✓	✓	Active
Microsoft.Windows.Photos	Photos app	✗	✓	✗	Commented
Microsoft.Windows.Recall	Windows Recall (current package name)	✗	✓	✗	Commented
Microsoft.Windows.Teams	Microsoft Teams (Chat) integration	✓	✓	✗	Active
Microsoft.WindowsAlarms	Alarms & Clock app	✓	✓	✗	Active

Prefix	What it is	ntdevlabs	tiny11-automated	winutil	Default in this repo
Microsoft.WindowsCamera	Camera app	✓	✓	✗	Active
microsoft.windowscommunicationsapps	Mail and Calendar apps	✓	✓	✗	Active
Microsoft.WindowsFeedbackHub	Feedback Hub app	✓	✓	✓	Active
Microsoft.WindowsMaps	Windows Maps app	✓	✓	✗	Active
Microsoft.WindowsSoundRecorder	Sound Recorder / Voice Recorder app	✓	✓	✓	Active
Microsoft.WindowsTerminal	Windows Terminal app	✓	✓	✗	Commented (already was)
MicrosoftWindows.Client.WebExperience	Widgets board	✗	✓	✗	Commented
Microsoft.Xbox.TCUI	Xbox Title-Callable UI (game overlay helper)	✓	✓	✗	Active
Microsoft.XboxApp	Xbox Console Companion app	✓	✓	✗	Active
Microsoft.XboxGameOverlay	Xbox Game Overlay (in-game UI)	✓	✓	✗	Active
Microsoft.XboxGamingOverlay	Xbox Game Bar overlay	✓	✓	✗	Active
Microsoft.XboxIdentityProvider	Xbox Identity Provider (sign-in service)	✓	✓	✗	Active
Microsoft.XboxSpeechToTextOverlay	Xbox speech-to-text overlay (accessibility)	✓	✓	✗	Active
Microsoft.YourPhone	Phone Link (formerly Your Phone) app	✓	✓	✗	Active
Microsoft.ZuneMusic	Groove Music / Media Player (Zune Music)	✓	✓	✗	Active
Microsoft.ZuneVideo	Movies & TV app (Zune Video)	✓	✓	✗	Active
MicrosoftCorporationII.MicrosoftFamily	Microsoft Family Safety app	✓	✓	✗	Active
MicrosoftCorporationII.QuickAssist	Quick Assist remote help app	✓	✓	✓	Active
MSTeams / MicrosoftTeams	Microsoft Teams (MSIX + legacy variants)	✓	✓	✓ (MSTeams only)	Active
Microsoft.549981C3F5F10	Cortana app (internal package name)	✓	✓	✗	Active

Not ported from tiny11-automated: nothing further — the table above is the full diff. winutil's list is a strict subset of this repo's; every winutil prefix not marked ✗ above is covered.

2. Scheduled task paths (`$scheduledTaskPaths`)

Task path	What it does	This repo / ntdevlabs / tiny11- automated	winutil	Default in this repo
Microsoft\Windows\Application Experience\Microsoft Compatibility Appraiser	Collects app compatibility telemetry	✓	✓	Active
Microsoft\Windows\Customer Experience Improvement Program (whole folder)	CEIP usage data	✓	✓	Active
Microsoft\Windows\Application Experience\ProgramDataUpdater	Updates compat telemetry cache	✓	✓	Active
Microsoft\Windows\Chkdsk\Proxy	Filesystem error notifications	✓	✓	Active
Microsoft\Windows\Windows Error Reporting\QueueReporting	Crash/error report submission	✓	✓	Active
Microsoft\Windows\InstallService	Store/Push-Button-Reset install service tasks	✗	✓	Commented
Microsoft\Windows\UpdateOrchestrator	Update Orchestrator scheduled tasks	✗	✓	Commented
Microsoft\Windows\UpdateAssistant	Update Assistant scheduled tasks	✗	✓	Commented
Microsoft\Windows\WaaSMedic	WaaS Medic self-repair scheduled tasks	✗	✓	Commented
Microsoft\Windows\WindowsUpdate	Windows Update scheduled tasks	✗	✓	Commented
Microsoft\WindowsUpdate	Legacy Windows Update scheduled tasks	✗	✓	Commented

The six commented entries are winutil's additions (§4 item 5: "make optional"). They're WU-specific and would reduce WU's ability to self-heal on a *serviceable* image, hence commented rather than active by default — enable them if you want a more aggressive strip on a build you don't plan to keep serviceable.

3. Registry tweaks

Grouped by the function that applies them. "Default" reflects the serviceable build; every Core-only function is forced on regardless.

Function	Tweaks	Source	Default
Set-BypassHardwareChecks	5 LabConfig bypass keys, AllowUpgradesWithUnsupportedTPMOrCPU , notification-cache suppression	ntdevlabs/tiny11-automated (identical set)	Applied per - BypassMode (Hive / Both); default mode None
Add-AnswerFileBypassCommands	Same 5 LabConfig keys, embedded as RunSynchronousCommand in autounattend.xml instead of an offline hive edit	Rufus wue.c (Rufus itself only sets 3 of the 5; this repo emits all 5 for parity)	Applied per - BypassMode (Unattend / Both)
Disable-SponsoredApps	~20 keys: OEM app suggestions, silent installs, Start pins, subscribed content IDs, push-to-install, MRT	ntdevlabs (identical)	Active
Disable-Telemetry	Advertising ID, tailored experiences, speech/ink/text collection, AllowTelemetry=0 , dmwappushservice disabled	ntdevlabs (identical)	Active
Disable-DevHomeOutlookInstall	workCompleted markers + UScheduler_Oobe removal for Outlook/DevHome	ntdevlabs (identical)	Active
Disable-Copilot	TurnOffWindowsCopilot , Edge Hubs sidebar, search box web suggestions	ntdevlabs (identical)	Active
Disable-ReservedStorage / Disable-BitLockerAutoEncryption / Disable-ChatIcon / Disable-OneDriveSync / Disable-TeamsInstall / Disable-NewOutlook	One or two keys each	ntdevlabs (identical)	Active
Disable-WindowsUpdate	RunOnce WU-stop commands, WU server redirected to localhost , OOBEDisableOnline , WaaSMedicSvc / UsoSvc deleted , plus winutil's AUOptions / UseWUserver / DODownloadMode=0 /BITS Start=4	asl-win11-coremaker.ps1 (aggressive form) merged with winutil (additive tweaks); see function docstring for the two documented conflict resolutions	Commented (serviceable build); Core only, forced
Disable-DiagnosticServices	DiagTrack / WerSvc / PcaSvc / SysMain set to Start=4	tiny11-automated	Commented
Disable-WindowsAI	WindowsAI policy keys (HKLM + NTUSER), DoNotShowFeedbackNotifications , AllowDeviceNameInTelemetry	tiny11-automated	Commented
Disable-WindowsDefender	WinDefend / WdNisSvc / WdNisDrv / WdFilter / Sense disabled, Settings pages hidden	asl-win11-coremaker.ps1	Core only
Set-BootImageSetupCmdLine	HKLM\SYSTEM\Setup\CmdLine = X:\sources\setup.exe	asl-win11-coremaker.ps1	Core only

Not ported from tiny11-automated (recorded here per §4's "not recommended for porting" precedent): Apply-PerformanceTweaks (memory/network/gaming performance registry tuning) and its Tiny11-branding keys (LegalNoticeCaption , the Tiny11Info desktop shell entry) — out of scope for this repo, which focuses on bloat/telemetry removal rather than performance tuning or rebranding.
